

Weatherization Day for JLHCA, Inc

On October 31, 2018, the Weatherization Department led by Weatherization Director Wayne Bodrick, with the assistance of his staff: Mr. Mal Watson, Mr. Chris Kornegay and Mrs. Michelle Snead held a Weatherization Day. This event was created to give clients a better look into the world of weatherization.

Each staff member gave a presentation on a few aspects of the weatherization process. Mr. Bodrick explained the Blower door testing, which is a process used to determine a home's air tightness. Mr. Kornegay explained the process of the audit and the final inspection. This process is performed once the weatherizing has been completed to assure that everything is completed. Mrs. Snead explained how the application process is completed. In order to process an application, the client would need to bring in a picture ID, Social Security card and income verification for everyone in the household and proof of ownership. At the end of the presentations, a short video was shown entitled "Grandma's House", which detailed the process of weatherization from beginning to end.

The event ended with lunch being served and a few giveaways (ink pens, night lights and energy books from Duke Energy) and a raffle for two gift baskets filled with items to assist in weatherizing the home.
